

# ANTEX Quality Policy

## ANTEX Quality Policy

ANTEX General Management considers its Policy of QUALITY and of CONTINUOUS IMPROVEMENT of all its activities an ESSENTIAL tool for the continuity and growth of its companies in the marketplace.

### QUALITY AND SERVICE

All manufactured product must comply with established internal and external quality and legal standards. To this end, process and product parameters and criteria will be applied to different stages of production to ensure that:

Start-ups are carried out in such a way that quality standards are met and that the minimum waste is generated.

Process control ensures that product is kept within quality standards and that the minimum defective product is generated.

The release and delivery of product complies with quality and legal standards, both internal and customer-specific.

### COMPETITIVENESS

Operations undertaken shall bring added value to the organisation. To this end, all processes that make up the Antex Group must be continually improved, thereby increasing their efficiency and reducing non-quality costs.

### CONTINUOUS IMPROVEMENT

The spirit of continuous improvement is an inherent component in all our daily activities. We also define and periodically review improvement objectives to ensure that our Quality Management System processes are as efficient as possible.
